This platform is to connect independent adjusting insurance firms to independent adjusters in the insurance industry. This is accomplished by having two sides to the platform. The first side is the side for the companies looking for the adjuster to do work. The other side is the adjuster that has a profile on the platform and can be contacted by the company.

This platform will be subscription based for the company side and free to use for the adjuster side. Payment will be accepted by credit card through the subscription when I decide to begin charging for the service in the future.

All company side main admin profiles will need to be verified individually before they have access to the platform upon initial subscription. This is so nobody can make a fake company profile page. This would come in as an email to me to verify a new profile sometime during the profile setup.

Company Side which is web based

Login page - Adjuster login / IA firm login - Login field for both sides of the platform.
Username - each individual will have a username that is their email address.
Password - passwords are not regulated and do not expire
Reset password - sends email link to reset password
Contact us - email us type form.

Landing after login page
Defaults to adjuster map

Header -
Adjuster Map - which is also the landing page after login on the company side.
Job posting creation page - tab for companies to create, modify and manage all of their job listing on the site.
Logout
Contact us - email us type form.

Adjuster Map
Map is visible in real time and filterable by category and zoomable. When filtered it will remove adjusters that don't have that category selected on their profile. Bar on side with drop down to select State as filter to see who has a license in that state. Map to be used is google maps. Adjusters locations are visible on the map as pins or similar and can be hovered over to see basic profile and clickable to see full adjuster profile.
Filters
Auto - Auto, standard vehicle, complex auto, heavy equipment, marine
Property - Residential property, Commercial property, farm/ranch, crop

Casualty - Liability/Casualty, auto liability, homeowners liability, general liability, physical damage, bodily injury, garage liability

Additional filters to be added to company and adjuster side of the app later.

These filters are drop downs that the company can toggle on the side of the map page or somewhere similar. These filters come from the profiles of the adjusters on the other side of the platform.

Contacting adjusters - IA firms can contact adjusters through the contact methods provided in the adjusters profile. Currently this contact method would not be through the platform. They would contact through their own email or phones. At a later date may implement a chat feature similar to the one on freelancer.com.

Job posting page

Company admin has permissions to designate job posting users versus only searching for adjusters.

Page is only for posting and management of job postings for that company. Not the same view as adjuster visibility.

No limit to the amount of postings but postings expire in 30 days and have to be manually reposted. This is to limit old postings and keep the page of positions current.

IA firms upload their logo that auto populates in every listing or something like this. Similar to job postings on indeed, zip recruiter or Linkedin.

Posting format needs to be customizable to each company. What I mean is i want the experience of the person making the posting to be as easy as possible while allowing them flexibility in their posting.

Job postings have filterable selections like residential property, casualty etc that are needed to be checked or toggled in order to be filterable on the adjuster end. I want the adjuster to be able to search by state, job type, company etc. Jobs should also be viewable on a map just like the adjuster map and filterable on the map view also so someone looking for a property adjusting job doesn't see auto or liability adjuster jobs.

Adjuster Side

Profile creation and dashboard to edit profile

See filters on screenshots for list. More will be added to this list during development.

Need to be able to turn on and off location services within the app. This is to allow the adjuster to be hidden or not viewable by companies if they are currently working, traveling or on vacation.

Need to be able to adjust accuracy of location by something like 100 ft, 1 mile, 5 miles or current zip code or similar. This is so when the adjuster has his app running in the background it doesn't

show pinpoint accuracy to the companies. The adjuster might want it to show he is in a certain radius of this area.

Adjuster cannot see the map of other adjusters like the companies can.

Job listings - Adjuster can see job listings created by companies as list and map views. These listings are filterable by the categories that the companies chose on their creation.
